

TakaTrack

Your personal budget assistant, and financial literacy guide.

Domain: Web and Mobile Application

Problem Statement

Bangladesh has a financial literacy rate of only 28%. Many people struggle to control their daily spending and save money simply because existing apps feel too clinical, tedious, or confusing. On top of that, most personal finance platforms are built only in English, leaving a huge demographic in Bangladesh without clear, intuitive access to money management. Without personalized advice or relatable financial education, staying disciplined with money feels like a constant, uphill chore.

Proposed Solution

TakaTrack changes this dynamic by turning money tracking into an easy, approachable, and educational experience. Designed with a clean, conversational interface that talks to you in fluent Bangla and English, it combines everyday budgeting utilities with a friendly, smart assistant. Instead of just showing numbers, TakaTrack coaches you on how to save, alerts you when you are spending too fast, and actually helps you grow your financial literacy over time.

Core Functional Modules

- **Smart Expense & Savings Ledger:** Easily log your expenses and track your savings goals split by categories, giving you a clear, visual picture of where your money goes.
- **Paginated Financial Advice:** Loads up with 5 practical financial tips right away, with a seamless 'load more' feature to constantly feed you actionable money-saving advice.
- **Bilingual AI Financial Chatbot:** An intelligent built-in AI assistant that converses naturally in both Bangla and English. You can discuss complex money choices, calculation questions, or long-term financial plans anytime.
- **Learning Academy & Quizzes:** A dedicated educational space to master budgeting concepts at your own pace, paired with short, interactive quizzes to test and validate your knowledge.
